V2 / RECORDED EXPERIMENTS

See what changed.

Run a controlled comparison or replay a saved trial. Replays read recordings and never call a model.

ORIGINAL VERIFIED EVALUATION · SCORE RECORDS ONLY

v4 → v5: 6/10 → 9/10 successful tasks

60% → 90% · evaluation `gate-mvcynupn` · 10 held-out tasks per brain, Lightning.

60% → 90%

No full trajectories were saved for this original gate. **No replay available.**

Run new trial comparison

Both brains receive identical seeds, actual task specifications, robot counts, shoppers and environment settings. These fresh results are separate from the original evaluation. Neither brain is promoted or changed.

First brain: v4

Second brain: v5 · live

Robots: 1

Maximum speed (m/s): 0.8

Robot 1

Task: PICK

Shelf slot: A-1-3-1

Held-out seeds: 101,102,103,104,105,106,107,108,109,110

Run new comparison · Crusoe

New runs make model calls and use the shared quota. A task unavailable at the requested slot may use a recorded equivalent slot, matched for both brains. Success requires delivery with zero refused actions.

Fresh comparison results

Refresh recordings

Held-out recordings can be replayed here. They are isolated from supervisor training, review and sibling-run inputs.

Success means the intended item was delivered with zero refusals. A finished run can still contain failed tasks.
